The only difference is the type of return; Printf () Prints the formatted string for the default output stream (mostly console), while string.format () returns the formatted string. The last part, long, represents the style of format used to make a more specific selection. String product = "pizza °"; Double price = 5.99; String string = string.format ("% 2 $ s is USD% 1 $ .2f", price, product); System.out.println (STR); With arguments, the order of arguments do not matter. They are needed more formatting flags after this. Follow me on Twitter and LinkedIn. You can also subscribe to the RSS feed.
